

# *FUEL YOUR DRIVE TO IMPROVE*

---

*DEVELOPING YOUR BUSINESS IMPROVEMENT CAPABILITIES*

# **GO SIX SIGMA**

*Manufacturing businesses' are facing huge competitive challenges.*

*Having a continuous improvement culture and capability are essential for a sustainable future.*

## Our Mission

Here at **GO SIX SIGMA** I am focused on helping manufacturing businesses in the Midlands region to develop the skills and culture that enables them to successfully and sustainably compete in their markets.

I always ensure that I offer the most appropriate mix of training, vocational skills, support, coaching and mentoring to grow your employees and management into an effective team of business improvers that get, and keep, your business ahead of the competition.

## Your Business

Do you recognise any of these issues?

Sales growth leading to capacity constraints and service issues in your manufacturing facility.

Employees just don't seem to have the time to resolve problems properly.

Consequently, employees spend far too much energy just dealing with, rather than resolving problems.

This is sapping the energy and morale of your team leading to high turnover.

You need to ensure you secure a real return on investment in developing employee skills.

Have unused, or don't understand how you can access, apprentice levy funds.

## Barry Moss *BEng, MBA, CEng, FIMechE, AMIOSH*

*Award winning professional engineer with 25 years manufacturing management experience across a broad range of sectors*

### About the Owner

I started my career as an apprentice before completing his BEng at the University of Sheffield. His 25 years in manufacturing has encompassed senior roles in engineering and operations management.

Along the way I have gained numerous qualifications and accreditations including an MBA from Aston University, CEng and Fellow membership with the IMechE. Also I am an Associate member of IOSH, an RCM2 Facilitator and of course a Lean Six Sigma Black Belt.

### Award Winner

# TEAM WINNER 2017

Pinnacle of my manufacturing career was my team winning the prestigious national Manufacturing Champions Team award.

In the final we beat Coca Cola, Weetabix and Glenmorangie with a sustainable continuous improvement project that had saved £87k in materials but generated an astonishing £750k of sales. This was achieved with a continuous improvement ethos and thus incurred minimal capital expenditure.

Team Award presented by BBC's Steph McGovern to Deb Limited

*Identifying your opportunities and the most suitable options to meet your needs will cost you nothing except a little time!*

## Opportunity Analysis

Before I start talking solutions I take time to discuss your business, the issues you face and perhaps the opportunities you are missing.

From this **FREE** discussion I then make a proposal on which approach would best suit your needs.

I am able to utilise Government funding such as the apprentice levy to minimise the financial impact.

## Apprenticeships

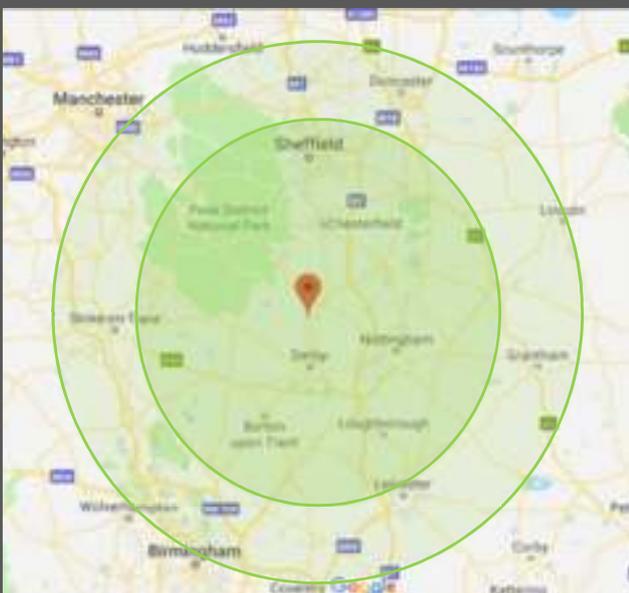

A cost effective way to upskill current employees of all ages with vocational training and coaching at your site\* that develops real continuous improvement capability to your team.

\* Subject to minimum group sizes

**L2 & L3 Business Improvement Techniques**  
Focused on Lean & problem solving tools
